

DHI-SP-PIXX

User's Manual

Foreword

General

This document provides a detailed introduction to the appearance, dimensions, and installation of the product. Please read it carefully before using the product, and after reading it, please keep the document properly for future reference.

Safety Instructions

The following signal words might appear in the manual.

Signal Words	Meaning
DANGER	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
WARNING	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
A CAUTION	Indicates a potential risk which, if not avoided, could result in property damage, data loss, reductions in performance, or unpredictable results.
©—™ TIPS	Provides methods to help you solve a problem or save time.
NOTE	Provides additional information as a supplement to the text.

Revision History

Version	Revision Content	Release Time
V1.0.0	First release	February 2025

Important Safeguards and Warnings

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, and comply with the quidelines when using it.

Transportation requirements

Please transport the equipment within the allowed humidity (\leq 95% RH) and temperature range (-20 °C to +70 °C).

Storage requirements

Please store the equipment within the allowed humidity (\leq 95% RH) and temperature range (-20 °C to +70 °C).

Installation requirements

WARNING

- To avoid electric shock to the human body or damage to the product, please turn off the AC power supply before connecting (non plug and play) devices each time.
- Avoid using this product in environments with high or low temperatures (operating temperature: -10 °C to +50 °C; humidity: 10% to 95%; storage temperature: -20 °C to +70 °C).
- Do not subject the product to strong impact or vibration, as it may cause equipment malfunction or damage.
- When moving the product, be sure to unplug the AC power supply.

Do not install the device in a damp place.

Maintenance and repair requirements

DANGER

- Do not use a damp cloth to clean your computer to prevent liquid from dripping into the computer and causing it to burn.
- To avoid unnecessary damage to the product caused by frequent switching on and off, wait at least 30 seconds before turning on the machine.

Do not disassemble the equipment randomly. Professional personnel must be present for maintenance and installation.

1 Summary

1.1 Checklist

Thank you for choosing our products.

Before using your product, please make sure your packaging is complete, if there have been damaged or you find any shortage, please contact your agency as soon as possible.

- OPS X 1
- Product manual X 1
- ATN Screw X 2
- Wi-Fi antenna X 2

2 Product Introduction

2.1 Product Configuration

Processor	- DHI-SP-PIXX	
СРИ	- Intel Core I5-12450H Processor - Intel Core I7-12650H Processor	
Graphics	- Intel® UHD Graphics	
Storage	- 1 x M.2 2280 SSD,Nvme/SATA,256G/512G(Optional)	
Memory	- 2 x SO-DIMM DDR4 MAX 3200MHz,8G/16G(Optional)	
Audio	- Realtek ALC897	
Front IO interface	- 1 x HDMI1.4 OUT - 1 x DP1.4 OUT - 2 x USB 3.1, 2 x USB2.0, 1 x Type-C(USB3.1) - 1 x RJ45 - 1 x Line-out & MIC-In Two In One Connector - 2 x Wi-Fi/BT ANT	
Rear IO interface	- 1 x 80pin JAE - 1 x 2.5/5.5 DC IN JACK	
Wireless	- 1 x M.2 2230 CNVI AX101,WIFI/BT Module	
Network	- Realtek RTL8111H	
Watchdog	- Support	
Power input	- 12-19V DC IN	
Environmental requirement	- Working temperature / storage temperature: - 5 \sim 45 $^{\circ}$ C / - 20 \sim 70 $^{\circ}$ C - Working / non working humidity: 10% \sim 90% non condensing / 5% \sim 95% non condensing	
OS	-Windows 11pro	
Dimensions	- 119(L) x 180(W) x 30(H) mm	

2.2 IO interface

Front IO interface

Rear IO interface

- WIFI1/2: WIFI/BT ant
- PWR: Power Switch Button
- LED: (top) hard disk indicator, (down) power indicator
- Lock: Anti-theft hole
- Audio: Audio output interface with mic
- DP: DP display interface
- HDMI: High definition multimedia display interface
- TYPE_C:TYPE_C port
- USB3.1: USB3.1 port
- LAN: RJ-45 network interface
- USB2.0: USB2.0 port
- RESET: Reset button
- JAE 80PIN: 80 pin extension port
- DC IN: DC power interface

2.3 Power information (when plugged into AC power)

Turn off the display: after 10 minutes by default, and it also can be set after 1, 2, 3, 5, 15, 20, 25, 30, 45 minutes, 1, 2, 3, 4, 5 hours.

Put the computer to sleep: 10 minutes by default, and it also can be set after 1, 2, 3, 5, 15, 20, 25, 30, 45 minutes, 1, 2, 3, 4, 5 hours.

The computer can be wake up from sleep mode by moving the mouse, tapping the keyboard, and network remote activation.

3 FAQ

${\bf Common\ Faults\ of\ OPS\ Computer\ and\ Troubleshooting\ Steps\ and\ Methods}$

Common faults	Troubleshooting Steps	Methods
Failure to power	①Check the power indicator of large	①Press down and hold the reset switch key

		contact problems.
Poor USB and No	①Clear CMOS.	①Press down and hold the reset switch key
touch	②Reset the system.	for 5 seconds to clear CMOS.
	③Troubleshoot the USB's own problems.	②Determine whether the USB driver is
		normal and disabled under the system, you
		can view it in resource management or
		software tool, and update the driver in case
		of any exception.
		③Reset the system with One-key Reset
		tool

Appendix 1 Security Commitment and Recommendation

Dahua Vision Technology Co., Ltd. (hereinafter referred to as "Dahua") attaches great importance to cybersecurity and privacy protection, and continues to invest special funds to comprehensively improve the security awareness and capabilities of Dahua employees and provide adequate security for products. Dahua has established a professional security team to provide full life cycle security empowerment and control for product design, development, testing, production, delivery and maintenance. While adhering to the principle of minimizing data collection, minimizing services, prohibiting backdoor implantation, and removing unnecessary and insecure services (such as Telnet), Dahua products continue to introduce innovative security technologies, and strive to improve the product security assurance capabilities, providing global users with security alarm and 24/7 security incident response services to better protect users' security rights and interests. At the same time, Dahua encourages users, partners, suppliers, government agencies, industry organizations and independent researchers to report any potential risks or vulnerabilities discovered on Dahua devices to Dahua PSIRT, for specific reporting methods, please refer to the cyber security section of Dahua's official website.

Product security requires not only the continuous attention and efforts of manufacturers in R&D, production, and delivery, but also the active participation of users that can help improve the environment and methods of product usage, so as to better ensure the security of products after they are put into use. For this reason, we recommend that users safely use the device, including but not limited to:

1. Account Management

1.1 Use complex passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters: upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use repeating characters, such as 111, aaa, etc.

1.2 Change passwords periodically

It is recommended to periodically change the device password to reduce the risk of being guessed or cracked.

1.3 Allocate accounts and permissions appropriately

Appropriately add users based on service and management requirements and assign minimum permission sets to users.

1.4 Enable account lockout function

The account lockout function is enabled by default. You are advised to keep it enabled to protect account security. After multiple failed password attempts, the corresponding account and source IP address will be locked.

1.5 Set and update password reset information in a timely manner

Dahua device supports password reset function. To reduce the risk of this function being used by threat actors, if there is any change in the information, please modify it in time. When setting security questions, it is recommended not to use easily guessed answers.

2. Service Configuration

2.1 Enable HTTPS

It is recommended that you enable HTTPS to access Web services through secure channels.

2.2 Encrypted transmission of audio and video

If your audio and video data contents are very important or sensitive, we recommend you to use encrypted transmission function in order to reduce the risk of your audio and video data being eavesdropped during transmission.

2.3 Turn off non-essential services and use safe mode

If not needed, it is recommended to turn off some services such as SSH, SNMP, SMTP, UPnP, AP hotspot etc., to reduce the attack surfaces.

If necessary, it is highly recommended to choose safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up complex passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up complex passwords.

2.4 Change HTTP and other default service ports

It is recommended that you change the default port of HTTP and other services to any port between 1024 and 65535 to reduce the risk of being guessed by threat actors.

3. Network Configuration

3.1 Enable Allow list

It is recommended that you turn on the allow list function, and only allow IP in the allow list to access the device. Therefore, please be sure to add your computer IP address and supporting device IP address to the allow list.

3.2 MAC address binding

It is recommended that you bind the IP address of the gateway to the MAC address on the device to reduce the risk of ARP spoofing.

3.3 Build a secure network environment

In order to better ensure the security of devices and reduce potential cyber risks, the following are recommended:

Disable the port mapping function of the router to avoid direct access to the intranet devices from external network;

According to the actual network needs, partition the network: if there is no communication demand between the two subnets, it is recommended to use VLAN, gateway and other methods to partition the network to achieve network isolation;

Stablish 802.1x access authentication system to reduce the risk of illegal terminal access to the private network.

4. Security auditing

4.1 Check online users

It is recommended to check online users regularly to identify illegal users.

4.2 Check device log

By viewing logs, you can learn about the IP addresses that attempt to log in to the device and key operations of the logged users.

4.3 Configure network log

Due to the limited storage capacity of devices, the stored log is limited. If you need to save the log for a long time, it is recommended to enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

5. Software Security

5.1 Update firmware in time

According to the industry standard operating specifications, the firmware of devices needs to be updated to the latest version in time in order to ensure that the device has the latest functions and security. If the device is connected to the public network, it is recommended to enable the online upgrade automatic detection function, so as to obtain the firmware update information released by the manufacturer in a timely manner.

5.2 Update client software in time

We recommend you to download and use the latest client software.

6. Physical protection

It is recommended that you carry out physical protection for devices (especially storage devices), such as placing the device in a dedicated machine room and cabinet, and having access control and key management in place to prevent unauthorized personnel from damaging hardware and other peripheral equipment (e.g. USB flash disk, serial port).
